Profile Summary

Flutter Developer with 3 years of hands-on experience in building scalable, high-performance mobile. Proficient in developing cross-platform solutions using Flutter, with a strong focus on clean architecture, modular design, and pixel-perfect UI implementation. Experienced in integrating Firebase services, RESTful APIs, and managing end-to-end development lifecycles from design to deployment. Committed to delivering intuitive, responsive user experiences and writing maintainable, production-quality code aligned with modern development standards.

Technical Skills

Programming Languages: Dart, SQL, Java
Mobile Development: Flutter
Architecture & Patterns: Clean Architecture (feature-based), MVVM (basic understanding)
Database & Backend: Firebase (Auth, Cloud Messaging), SQL Server (basic querying)
API Integration: REST APIs, Google Maps API, Spotify API
Development Tools: Git, GitHub, GitLab, Postman, Android Studio, Xcode, VS Code
Deployment: Play Store, App Store (manual release process)

Work Experience

OKIT Technology – Puducherry, India | Software Developer (Flutter Developer)

Mar 2022 – Mar 2025

- Developed and maintained production-ready cross-platform mobile using Flutter.
- Followed clean architecture and modular project structure across all major projects.
- Integrated REST APIs, Firebase (Auth, Firestore, Storage), and third-party SDKs like Google Maps API and Spotify API.
- Collaborated with designers and backend teams to implement responsive UI, authentication, and role-based flows.
- Collaborated with backend and DevOps teams during code reviews, release planning, and mobile app deployments.
- Contributed to cross-functional projects, ensuring code quality, scalability, and alignment with user experience goals.

Projects

Jukky | *Real-time music engagement platform for venue-based user interaction.*

An interactive music platform that allows users to request songs available at their current venue. Requests are dynamically queued and ordered based on popularity (likes), with live updates of the current and upcoming songs in the playback list.

- Developed a real-time request system with search functionality and REST API integration to enable users to request songs based on venue-specific availability.
- Implemented a dynamic queue ranking system that prioritizes requested songs by user likes, ensuring fair and engaging playback order.
- Designed responsive and adaptive UI components for seamless user interaction across various devices and screen sizes.
- Implemented real-time playback visibility, allowing users to track currently playing and upcoming songs within the venue queue.
- **Technologies Used:** Flutter, Dart, REST APIs, Google Maps API, Git.

Hedone Access | *Event booking and QR-based entry verification platform.*

An event management application that enables users to explore and book events with secure QR ticketing, while allowing organizers to verify attendee access at the venue through scan-based validation.

- Developed the user-facing app for event discovery, paid booking, and QR code-based ticket generation.
- Built the organizer-side interface to scan attendee QR codes and validate bookings at the event venue.
- Integrated Stripe payment flow and automated QR issuance upon successful booking.
- Designed access flows and structured reusable UI components across booking and check-in modules.
- **Technologies Used:** Flutter, Dart, REST APIs, Google Maps API, Stripe, QR Code Integration, Git.

Henna Treasure | *On-demand tattoo booking and personalized care product delivery platform.*

A modern service platform where users can discover tattoo artists, book appointments, and receive curated product recommendations with the option to order them for home delivery. Designed to support personal expression and self-care through a seamless mobile experience.

- Built intuitive multi-section UI for tattoo artist discovery and care product browsing.
- Developed artist profile modules with biography, style previews, and booking interface screens.
- Implemented appointment scheduling UI with structured form inputs and calendar-based slot selection.
- Designed product recommendation screens based on user input and service categories.
- **Technologies Used:** Flutter, Dart, Google Maps API, Git.

Cofee | *Responsive web UI for financial-style data tracking and visualization.*

A Flutter web interface designed with the aesthetics and structure of modern financial platforms. The app allows users to explore usage data through dynamic charts, balance cards, and dashboard views, focusing on responsiveness and interactivity across desktop and tablet breakpoints.

- Built responsive web UI components resembling wallets, transaction overviews, and balance summaries.
- Integrated interactive activity charts using Syncfusion Flutter Charts for browser-based analytics display.
- Developed reusable UI modules with consistent styling and theme hierarchy.
- Designed layout for seamless scaling across web viewports, applying grid and flex-based structures.
- **Technologies Used:** Flutter Web, Dart, Syncfusion Charts, Git.

AETC Pro | *Personal and shared finance tracking with document management.*

A secure finance management app designed to help individuals and families track income, expenses, and investments, while organizing and managing financial documents in one place. Built to simplify personal and shared financial workflows through a structured and intuitive mobile experience.

- Built mobile UI for income/expense logging, investment tracking, and visual summaries for both individual and shared (e.g., spouse) financial views.
- Integrated REST APIs for uploading, editing, and organizing sensitive financial documents.
- Developed screens for document categorization, preview, and in-app editing workflows.
- Enabled e-signature functionality by triggering external mobile signing pages and capturing signed data via backend API.
- Applied secure input handling and optimized layout responsiveness for smooth cross-device usage.
- **Technologies Used:** Flutter, Dart, REST APIs, Git.

Juke4Me | *Community-driven music queuing and voting.*

A music app interface that allows users to search for songs, add them to a shared queue, and vote on what plays next. The queue dynamically reflects user preferences based on vote scores, simulating a real-time, community-powered playlist experience.

- Built UI screens for song search, queue display, and vote-based ranking interactions.
- Designed clean components to visualize voting logic and playlist position updates.
- Developed consistent mobile UI layout using Flutter widgets and theming.
- **Technologies Used:** Flutter, Dart, Git.

Education

Bachelor of Engineering in Computer Science and Engineering

2017 – 2021

Sri Vidya College of Engineering and Technology, Virudhunagar.

Higher Secondary Certificate in Computer Science

2015 – 2017

*SHN Edward Higher Secondary School,
Sattur.*
